Annex 4

National Screwworm Eradication Program

Animal Owner:

The sample of worms that you recently submitted to the Screwworm Eradication Program was received on December 28, 2008 and was identified as Cochliomyia hominivorax, commonly known as screwworm. The Screwworm Eradication Program appreciates your collaboration and with your continued help, this pest can be eradicated. Please remember to inspect your animals for open wounds and if infested with worms, please collect a diagnostic sample and send it to the Screwworm Eradication Program. You can help the Screwworm Eradication Program by treating open wounds with the “Wound Treatment Powder” which, can be obtained from your local Screwworm Eradication Program representative. Also remember that if you move or market your animals, they should be healthy and not have any maggot infested wounds. For more information or how to obtain Sample Collection Kits and Wound Treatment Powder, please contact the Screwworm Eradication Program. Again, thank you for your sample and we appreciate your continued support of the Screwworm Eradication Program.

Animal Owner:

The sample of worms that you recently submitted to the Screwworm Eradication Program was received on December 28, 2008 and fortunately, it was not screwworm and was identified as Cochliomyia macellaria, the secondary screwworm. The Screwworm Eradication Program appreciates your collaboration and even though this sample was not screwworm, the screwworm fly continues to menace our animals and with your continued help, this pest can be eradicated. Please remember to inspect your animals for open wounds and if infested with worms, please collect a diagnostic sample and send it to the Screwworm Eradication Program. You can help the Screwworm Eradication Program by treating open wounds with the “Wound Treatment Powder” which, can be obtained from your local Screwworm Eradication Program representative. Also remember that if you move or market your animals, they should be healthy and not have any maggot infested wounds. For more information or how to obtain Sample Collection Kits and Wound Treatment Powder, please contact the Screwworm Eradication Program. Again, thank you for your sample and we appreciate your continued support of the Screwworm Eradication Program.

Thank you.

Sincerely,

Program Director
